

A Kind Request: I'm not good with words. I think my idea can be expressed better visually. I tried to explain the app in words because limit to one page. Please visit <http://goo.gl/TR4GtY> and click 'SCREENS' on top of the page to see screens I created visually. Thank you.

1. LOGIN SCREEN

Login screen requires users to sign in using their Facebook account to enable this app sync its feature with user's Facebook account.

2. HOME

The home page of this app lists its features like 'U & KERALA', DESTINATIONS, SPECIALITIES, FESTIVALS, HOSTELS AND TRAVEL DESK. All these features are important for tourists.

3. U & KERALA

This feature enables users to upload pictures taken in Kerala in their Facebook. The best feature would be the app will include a hashtag (example : #KERALA) in their Facebook post and the location when the picture is uploaded. As we all know the HASH TAG is the best element of social networks like Facebook where we can see posts of others with similar hashtags. This feature ensures more people know about Kerala via pictures and social networks.

4. DESTINATIONS

This feature enables users to know more about HOT tourist spots in Kerala or they can simply search any place they want. A location map will be shown and nearby Place of Interest (POI) will be listed by category like hotels, restaurants and activities.

5. FESTIVALS & SPECIALITIES

This feature provides users with festivals details, dates and locations. Similarly for specialities, related information will be shown.

6. TRAVEL DESK

Travel Desk provides contact details of Department of Tourism, Kerala Tourism and also registered travel agencies or taxi services for the tourists. We can prevent fake travel agencies or tour guides. All the agencies listed in our Application will be trusted and verified. Kerala Tourism also can charge a fixed amount to the travel agencies to advertise on this app.

7. HOTELS

Hotels are very important for travellers. This feature will enable users to locate nearby hotels based on their current location. This app will retrieve location from the smartphone location and will search nearby hotels. Otherwise the screen will list down hotels based on the rating. Kerala Tourism can charge a fixed amount from the hotels to advertise their hotels in this app.
