

Get My Guide – Your Guide to Kerala

Problem Faced:

- Whenever a tourist visits a place in kerala, as he is new to that place they are cheated by the local people (taxi/auto/rickshaw drivers).
- Tourists don't know the place to stay closeby.
- Socialize

The Idea:

We can make an app which will have the complete information about the place, the places to visit and the best ones liked by the people. On the way this app will also show the best possible way to get to that place from your present location via gps or google maps. Moreover it will also show the fares to be taken in the journey. So no one can cheat you seeing that you are a stranger. These fares will be submitted by the people themselves. This platform will be completely crowd- sourced.

Other important feature of this app will be that you can also get your guide. You can get a personnel guide, you can check his profile as well as reviews of other people about that guide.

You can preplan you travel and know the people around you who are going to visit the same place in your time period and get connected. In this way you would no longer be a stranger to that place.

I think this idea can go crazy if implemented the way I think.
