

## **THE BEST CHOICE**

Most of the tourist find it difficult to choose a proper service which is reliable and economical. Tourists are often cheated by charging them with higher prices for services like transportation, lodging etc .The safety and security associated with these services are also questioned.

This app give users the option to 'rate' the service they have taken. Based on the ratings from different users an average rating for the place or service will be made. So other users can make a better decision in selecting the place or service based on the average rating given.

The rating will be done based on the reliability, security, comfort and the cost associated with the service. Each user has to create an account to register their ratings while no account is required for viewing the ratings .The rating can be made for services like hotels, lodges, autorikshaw , taxi ,buss etc...

The user can also give a brief review of the situations in which he or she got cheated so that other users can avoid a similar trap. Phone numbers of nearest hospitals, police stations, ambulance services, railway stations and buss stands are also included in the app.

By using this app the users can select the best choice available to them and can lead a more secure journey. The Kerala tourism department can check the areas where the ratings are low and can take measures to improve the service there. Thus with the improvement in services more tourists will visit Kerala thus raising the revenue of Kerala tourism department.
