

My dream is a multi task app with the options of tour planning, map, sharing etc.

Name: KLIDE (Kerala guide)

Function:- the opening window will be with four options:

1.“NEW TRIP”

2. “MY TRIP”

3.”EMERGENCY’: it is simple idea that this button would be active, even the phone is out of coverage area, with help of satellite radio

4. “MAP” (with police stations, hospitals and tourist spots).

The option “NEW TRIP” basically a tour planner and it open to a map with the special reference to the picnic spots in Kerala. The arrival point of tourist will became the epicentre of travel. He/she can select the places which he wants to visit as their aspiration. The app will arrange automatically according to travel distance or could arrange manually. When planning is done the entire time will automatically set in default mobile alarm also. The next window is same as “MY TRIP” with the following icons.

1. “MY MAP”: the rout that he/she had selected for his/her travels.

2. Instant Messaging/Chatting tool with other tourist who using same app or tourism department for assistance and sharing experience.

3 One Clicks Sharing Button of photos, videos, and etc. with many social networks with only one click.

4. Video calling: with limited /unlimited close family members, and friends.

5. Emergency Call Button: to nearby police station.

6. Ticketing Button: it would help to ticketing of KSRTC, train, and air travels (i.e. this button includes three sub buttons for each option and can access to all these three facilities. it can be included with the help of corresponding departments.

Another important function of this app is it will be allow the authorities to locate the user with the help of GPS, and can give him/her sufficient information about the destination on the actual time.

As the tourist arrive in the spot, The messages with full details of the spot and about the traffics, weather forecast, train and bus times, police stations, hospitals, food courts, shopping canter ,and festivals of that places, will come to the app inbox or as ordinary SMS if he/she is out of internet.
