Problem

Today when a tourist visits Kerala, language is a biggest issue for everyone. All the boards are in local language, bus boards are in Malayalam etc. This makes foreign visitors uncomfortable and navigation would be difficult.

Solution

Create an application which will use the phone camera to take a photo of a board, it could be a bus board and notice board or anything which has a malayalam text in it. The program should convert the malayalam text to English so that the foreign tourist can read about it.
