

## Photo Fun

Many times when visitors visit a place which is having some historical importance, the local government does not allow them to take photographs due some preventive measures.

Therefore, make an app full of HD quality images in different angles and views, so that visitor would not be disappointed. If possible make a provision to edit the images and integrate other images onto the given image e.g.

1. When we visit India Gate at Delhi, local photographers use their skill to take a snap such that it may feel like the person is holding the India Gate in his hands.

2. App should have the facility to overlap our family photo beside the famous destination. Take a look at below image:-
