

## **Whereabouts** - Mobile App

**Whereabouts** is a solution which let foreigners/ new comers to know where they could get facilities such as Kerala tourism center/ hotel rooms/travel agency office/Spot detail/ Ayurvedic massage center/Government hospital/shopping centers) near by areas(with in a walk able distance) by showing images and address details within a limited buffering zone, while one walk with this application on mobile.

Even though we have a inbuilt Google maps in mobile phones, that will show only the point and routes. But, this app will show you the image of the current location, address, and details about the place automatically, when a person walk around. It needs to be worked on tracking longitude and latitude based mobile locator and GPS and GIS(Geographical information system) enabled technology.

When one open the app, information about the place/point/ needs to be shown automatically with the help of preloaded data. This Mobile app needs to be worked like what tourist guides do. There is also chance to earn money by this app from traders those who are doing business at tourist spot by means of presenting their details on this Mobile application.
