

App name - Kerala Tourism

Display icon of Application as Kerala Map.

On clicking the application the startup screens in the mobile should be a 3D Globe that can be rotated in 360. Display the colour of India map alone in different colour in order to differentiate with other countries in the 3D Globe. On clicking India set the option as user can able to click only "Kerala".

The state Kerala alone can be displayed in different colour among other states in India and let the user to zoom the state. The zooming option will allow to see different places of Kerala in single touch. You can use Google Maps to show the different places of Kerala (this includes buildings, trees, rivers, ponds, mountains, etc.) This is the startup option in order to attract the peoples.

The list of menu's to be displayed in the application is

1. Home menu with 3D Globe/Map to view the beauty of Kerala on zooming
2. History of Kerala - A detailed description of Kerala. I mean Kerala's good qualities like 100% education, etc.,
3. Latest News & Events - If a tourist person visits he will first look at what are the latest news and events are happening in and around Kerala state. This contains Separate columns like "Latest News", "Latest Events", Regarding Local games happening around Kerala, etc.,
4. Latest News - should contain recent VIP's who visited, News about currently happenings in and around Kerala, News about Weather condition, News about latest Film release, etc., These details can be viewed and accordingly the tourist can plan their schedule. Also incase of latest films, booking tickets can also be made.
5. Latest Events - This menu will contain events happening around Kerala like events in Big Malls, Hotels, Events in best places, Big Cultural events/dance happenings in schools/Colleges, Museum's, Dance Classes, Church or in Temple's, Parks, Sports club activities, etc., These events can be viewed by tourist persons on selecting date and month which can display the particular event happening at this time for the selected date and month. This can also have a separate option to view full description for a particular event as selecting "More" option.
6. Kerala Map - This is a separate option where user can see the Best tourist spots and Visiting places/Sightseeings of Kerala. A pin view in the Map orientation which show the places and on clicking the pin this will show the short description of the tourist spot and they can visit the place in the 3D map view and see the place. If the user likes they can see the place in phone itself of how the spot is in a 3D view by zooming the interior area of selected spot. This can contain a separate "VISIT" button which will ask for the users location. Track users location and track the selected "Visiting Spot" and get the direction.
7. Business List - This icon can show the options like "Food & Drinks", "Health, Beauty & Fashion", "Home, Leisure and Electronics", "Hotels & Travels", "Property and Finance", etc., options whereby each option will show the details of it. For example if the user selects "Food & Drinks" lets display the shops where food and drinks are available and on clicking a particular shop from many displayed this can display the Photo of the shop and the availabilities of the shop. Let there be one more option called "Click Here For Details" which shows the address of the selected shop or Show the direction of shop using "Google Maps"
8. Useful Informations - This menu will provide additional details for the users like "Ambulance Services, Churches, Dentists, Doctors, Clinics, Local Government, Fire Brigade, etc.," which shows the address.
9. Feedback - Users can give feedback by selecting few options like Feedback/Tourist Place/General Suggestions. This will help the Kerala Government that how Peoples from specific place behave with Tourist Persons. This will also make Kerala Government to improve in future.
10. Call - If the user doesn't have internet facilities they can call to a particular number who can guide the tourist and the guide should be available for 24x7. Video calling is also enabled and chat functionalities can also be implemented for caring visitors.
