

To develop mobile application naming “Kerala Guide”

There need to create simple mobile application which can be easily use by common people.

The application must be provided with map detail location of places that are very famous in Kerala.

One should be able to search places as per desire.

It is also desire to provide distance from air port to the location and from there to related nearby other location and in sequence.

The photographs of the place, its look and nearer environment detail should be included about the location detail.

Beside this hotel facility for the tourist for related places should be available in the application. Suppose one need to search about hotels in nearby location vis., 3 stars, 5 stars, A/c, non A/c rooms in hotel. It is also desire to provide cost as per facility in hotel.

This is very important it must be Integrated with Facebook, Twitter, Email and many other social media so as one can share updates and tweets about Kerala trip.

One more feature desired in the mobile application is “**Location finder**”, the special feature that allows the tourist to locate him/her self by adding the **Tour ID**. (So it is require to provide unique tourist ID either for individual, family or goup by the Kerala tourism department.)
