

Windows mobile apps.

Windows mobile was a powerful platform that enabled developers to create varied applications to enhance user experience. Creating windows mobile applications was made easy for the app developer - almost as easy as creating desktop apps.

what you will need

- Visual Studio 2005 or 2008.
- Windows mobile SDK
- Active Sync or Windows mobile Device Center.

Let us now look at the tools you can use to write data for creating windows tourist place apps.

Google Data APIs

Help developers access and manage all data related to Google Services. Since these are based on standard protocol like HTTP and XML, coders can easily create and build apps of the windows mobile platform.
