

Tourist places - easy find

When you start building ~~traveler~~ visiting Kerala app, this how the interface is going to look (after all info is added) chose to do a traveler visiting app because the ~~triathlon news~~ app market is wide open for app (someone go steal that idea and make an awesome triathlon app - you will make a ton of money.) I used the Add Another tab Area to add RSS feeds and some photo feeds. you can see the preview of your app on the right side in real time, a nice bonus.

what this is doing is taking the RSS feed and passing it into easy to read format on the phone. They can be blog posts or ~~news~~ tourist place coming off of the main website. They have a nice RSS search engine built in so it really is easy find the RSS feed of choice.
