

An ultimate guide for all solutions

Once a user opens the app of Kerala tourism, he/she should get topmost famous tourist destinations in Kerala. It should be provided with option to select the district. On selection of district, it should highlight all important tourist location in that district. Information also should include the details like distance, route map, bus stand, hotels, hospital and police station in the vicinity, so that it will help the tourist at the time of emergency.

App should be developed keep in mind of users who had GPS facility as well as those who don't. In case of GPS available handsets, the information must be updated as per current location that is if the passenger is moving, the information about the places should be updated accordingly.

App must provide alerts regarding tourism related issues as well as factors affecting tourism for example, Say Today there will dawn to dusk strike at Idukki. So it will help the tourist to alter his plans accordingly.

App should include an option for rating and reviews that is for example, a tourist is staying a hotel, he/she can write the review of the about the hotel and rate that hotel. So that in future other tourists can review and choose the good facility in the future.

Provide "Do list" for each specific tourist location (of his/her choice) so that user can keep track of events and plans for that specific.
