

GOKERALA Travel Essential For Tourists

My idea is about making an app which is essential for them who visits kerala. And it is also very helpful for the kerala tourism department. The User interference of the app is like a book, so that you can swipe and go to various pages and with a side menu in which you can select various options. Home page of this app shows the specialities of our Kerala like our spicy foods, lakes, awesome locations etc. with images. The main part of this app is the option Explore, in which a map of kerala is seen and the various tourist destinations in kerala are marked and when you click on a certain location, a page of the specific location is open up with information and colourful photos of the specific place and kerala tourism's services also on that locations are specified like hotels, transportation etc. So this will be a benefit for Kerala tourism department. And also a rating system is provided for the tourists to rate the services. And also a share button is placed below for sharing this to social medias. Then another Menu called news Where Events conducted by kerala tourism Department is listed and also the newses are listed. Then another page where people can write and share their awesome experiences during their Kerala visit, they can even post photos here. And specialised contents in every week is also shown on news page. I think my idea will be very helpful to Kerala tourism Department.
