

# PERSONAL TOUR GUIDE

Now a day's every one mobile phone or tablets . So we can use this mobile phone or tablet as the personal guide for the tourist. voice interaction can me make a customer more user friendly .

The main features what we can do with this app are,

## **Language translation(Speak and listen to Malayalam using app)**

Most of the visitors can't understand or speak Malayalam , So all the time they depend on a guide for the language translation. In this situation the **visitors can speak to the application in their own language and the application translate the content to Malayalam and speaks out. vise versa** It will translate Malayalam to the user language(English )

## **Malayalam Word Translation to the user defined language**

The user can take a photo of any Malayalam written board at the time itself the content in the board will be translated to the user defined language. This will be useful in transport bus travel . All the transport vehicles board are written in Malayalam , so the tourist guys get confused. We can avoid this situation using this app

## **Navigation(Offline map using GPS)**

This the other feature user can search nearby places and navigate to the particular area . And even the user got lost they can ask the help from the mobile even there is no internet connection. And **the map suggest places according to the user personal interest.**

## **Rate Chart**

Give the standard travel expense in Kerala in all vehicles so the visitors cant be cheated by the locals.

If we combine these features into one application the user feel Kerala as their own town and can go anywhere and enjoy freely without any external help.
